

Basic Electricity

Ohms Law

Relationship between voltage, current and resistance (VCR)
it takes 1 volt to push 1 Amp thru 1 Ohm of resistance (VAO)

$$\frac{E}{I/R} ?$$

Resistance

measured in ohms - the slowing of free electrons
as they pass thru a conductor
factors length, diameter, temp, etc

Capacitance

The ability of a conductor to hold a charge.
high resistance to DC low resistance to AC
factors length, insulation, closeness of pairs, twist
EX. CONDUCTOR IS A CAPACITOR

Inductance

The field around any energized conductor.
low resistance to DC high resistance to AC

Electron Theory

The movement of free electrons along a conductor
from negative to positive along a path of least
resistance

AC

Alternating current

constantly changing in amplitude and polarity

DC

Direct current

Current Flowing in one direction negative to positive

DC

Dry cell

usually non-rechargeable

battery in a meter

Wet cell

usually Rechargeable

CO Battery SLIC
