

LOADING

- THE PURPOSE OF LOADING IS TO INCREASE LOOP RESISTANCE AND BRING THE PAIR BACK INTO PHASE,
- LOAD COILS ARE AN INDUCTIVE ~~RE~~ CIRCUIT. THEY ARE USED ON LOOP LENGTHS OVER 18,000 FT AND PLACED 3,000 FT FROM THE C.O. AND 6,000 FT THEREAFTER TO WITHIN 9,000 FT OF THE SUBSCRIBER.
- SPACING TO WITHIN ± 120 FT IS CRITICAL.
- LOAD COILS BLOCK FREQUENCIES BETWEEN 3,400 AND 4,200 Hz.
- WE USE 700 TYPE LOAD COILS CASES.
662 RATED AT 88 mH (MILLIHENRY)
(IT TAKES 88 mH OF INDUCTANCE TO ~~OF~~ COUNTERACT 6,000 FT OF CAPACITANCE)
ALSO 668 AT 44 mH
669 AT 22 mH
