

THE U-TECK MULTIRAM RDA IIIA Monitoring System

A Safety Item tested before and after each use, weekly and monthly on form 6A

The RDA 3A is a continuous duty , all solid state electronics, remote environment monitoring system designed to detect flammable gases, ~~much more accurately than the B Gas Meter, which it is to replace.~~ It has an accuracy within 5% of calibrated level and a response time of 10 seconds at 10% of Lowest Explosive Level. The system consists of two main parts , the Central Monitor Unit (CMU) and the Remote Sensing Unit (RSU) with its 50' cord.

SOME GASES DETECTED (memory aid PAGAN HAMMER BC)

Propane	Acetylene	Gasoline Vapor	Alcohol
Natural Gas	Hydrogen	Ammonia	Methane
Mapp Gas	Ethylene	Refrigerants	
Butane	Carbon Monoxide in high concentrations		

The CMU - system controller , provides power to the RSU & monitoring the alarm status. Kept outside of the work environment and protected from inclement weather.

- Powered by either 115v AC (or optional 12v DC not purchased by Verizon)
- Power Status Lights - Amber = AC & Blue=DC (bulbs are interchangeable)
- Mounts on manhole racks with optional bracket
- Alarm status - light for visual warning and LOUD audible horn
- Alarm Latching Switch (sounds alarm till reset)
- Storage for RSU and 50' cord
- Fuses located at the rear of CMU (AC 250Volt 1/4 amp)
- Serial number located on back left side on silver plate

The RSU the gas detector and work area warning

ALARM PIZO?

- 50' cord permits proper positioning and checking with duct wand
- Alarm Status light - Green - shows unit is on and working
- Alarm indication light (RED = Danger)
- Test / Alert Button - call for assistance to coworkers outside/above work area.
- Gas sensor inlet also used to mount the boot for the non-conductive duct wand
- Duct wand has an aspirator bulb to draw air to gas sensor
- If cord is unplugged or cut alarm will sound
- Calibration label listing serial number of CMU MUST BE PRESENT to USE!!

Non-Conductive Duct Wand - Used to force air samples into RSU from hard to reach Ducts , cracks and corners of manholes or other work environments.

- Kit consists of three parts: Aspirator bulb w/ check valves and RSU boot , Extension section and Intake section.
- Do a 5-10-10 inspection on the kit
