

3) **D - Leather Protectors** (Check for cut at Gauntlet at exam)

Protects rubber gloves from creosote, splinters and wear, worn outside rubber gloves
Inspect for tears, rips, loose stitching, creosote, splinters and imbedded objects
Put leather gloves on one at a time and feel around with other (bare) hand checking glove for defects
You **MUST CUT OFF ANY BUCKLES**

4) **F - Rubber Gloves** SAME OR 1 SIZE SMALLER THAN LEATHERS

Offer ONLY electrical protection
1" per class of glove longer than leathers (we use class 2 = 2" longer) this prevents the leather from conducting electrical hazards to us
Rib at gauntlet is the Flash Over Dam preventing rain or moisture from creating a pathway for possible electrocution

5 TESTS

<u>Date</u>	If all other tests pass and this one fails you may use for <u>remainder</u> of shift.
<u>Stretch</u>	Pull and stretch fingers, looking for inner color to RED to show through
<u>Resiliency</u>	When gloves are rolled up they should return to original form by themselves
<u>Finger Roll</u>	Roll fingers and tips of fingers, looking for RED showing through
<u>Air Tightness</u>	Fill with air, hold up palm of glove to your face and cheek to listen and feel for any holes then turn to other side of face and check back of glove

Turn gloves inside out (to RED side) and perform the stretch and finger roll tests looking for the BLACK to show through return gloves back to black side for the last test, the Air Tightness Test.

If any of the tests (except the date test) fails, both gloves are to be cut from gauntlet to fingertip and returned to foreman.

THEY COME AS A PAIR, THEY LEAVE AS A PAIR

Gloves are stored Cotton liners palms in, Rubber gloves palms in over cotton liners, and Leather gloves palms out. The three pairs are stored in a canvas bag marked insulating gloves, fingertips up, placed safely into bag not catching zipper. Stored behind seat in truck, fingertips up to allow for moisture to drip out/down to bottom of bag and also to keep the weight/pressure of gloves off fingertips. Keep out of sun and out of reach from objects that may puncture the bag.

REMEMBER WHEN REMOVING GLOVES AND WHEN PLACING GLOVES INTO THEIR STORAGE BAG, PLACE YOUR FINGER UNDER THE ZIPPER AS YOU ARE UNZIPPING/ZIPPING, TO PROTECT THE FINGERS OF THE GLOVES CATCHING ON TO THE ZIPPER

At the exam you will remove the liners , leathers and rubber gloves from the bag lay them out. Check the bag , liners leathers and rubbers in that order.
